

# Multi-Camera Interview Room Surveillance

## Interview Room

### FLEXIBILITY

COBAN's Interview Room solution offers ultimate flexibility:

- Supports multiple cameras
- Select a combination of dome cameras and/or covert cameras
- Gives control to the people who need it

### SEAMLESS INTEGRATION

Capturing video with a COBAN solution—in the office or in the field (car, motorcycle, bodycam)—ensures consistency and continuity in the chain of evidence:

- The same back office management system
- The same set of rules and system policies
- The same case IDs and metadata

- Fully controllable viewing privileges
- Automated video life cycle maintenance
- Important videos can be burned automatically

**Complete Chain of Evidence.** Link interview room videos with field (in-car and bodycam) videos simply by using the same incident ID.

**Direct, In-Room Controls.** An interview-room switch gives the interviewer direct control to begin and end the interview session. The switch has an indicator light to show when recording is in progress.

**H.264 Video Format.** Recording video in the most up-to-date industry H.264 standard means your video is the most portable.

**Quick Bookmarks.** Function keys are preset to identify common interviewee behaviors (looking away, too much detail) so that you can easily bookmark these behaviors during the interview. When watching the video later, you can view the list of bookmarks, click on the specific behavior you're interested in, and go directly to that point in the interview.

**View Multiple Live Interviews.** You can view multiple live interviews on multiple monitors on the network.

**Define Viewing Privileges.** The department defines who may view interviews. Depending on a person's role, access can be fully restricted, semi-restricted, or fully open.

**Easy System Integration.** COBAN Interview Room works with most existing audio equipment and analog cameras.

**Automatic Security Restrictions.** Video access is automatically restricted based on the case information entered.

**Upload Video Directly to the DVMS Server** immediately after completing an interview--no import/export procedures are required.

**Export as Necessary.** Easily burn videos to DVD or export audio to a .wav file if needed.

**Manage and Store Videos.** Use COBAN DVMS (Digital Video Management System) to manage your entire video life cycle and provide easy access to extended storage systems (such as automatic DVD burners and tape libraries).
