

# TopCam-G2

## In-Car Digital Video System

The COBAN TopCam-G2 stand-alone digital video recorder provides unlimited flexibility with a 6.4" touchscreen and a rugged, 40GB removable drive.

**6.4" Touchscreen Monitor** that is less than 1" thick. Users have the ability to tag videos with the correct identification and enter relevant data immediately after each stop.

**Hands Free System Update** eliminates the task of touching each vehicle for fleet management. Using an automated procedure, via wireless technology or removable hard drive, update software versions and change system settings (such as video specs, power management, and more) eliminating human intervention and decreasing admin time.

**Smart Power Management** detects low voltage conditions and enables the system to protect the vehicle battery while at the same time providing maximum system usage.

**Rugged 900Mhz Bidirectional Water Resistant Mics** reach out to over 2000 ft. A programmable buttons that can be defined by the agency and offer multiple options for programming and a battery that provides up to 10 hours of talk time.

**Stand-Alone or Integrated with an Existing MDT or Laptop** the TopCam-G2 is built on an open architecture design allows departments to connect whatever devices they need for their jobs. The system also incorporates the ability to connect multiple, configurable recording triggers such as light-bar, speed and more.

**No Limit Pre/Post-Event Recording Setting** can be defined by departments.

**CAD/RMS Integration** helps streamline processes by automatically tagging videos with information such as case and ticket numbers as well as other important information. All of these can later be used to enhance search capabilities or to generate reports through the COBAN DVMS.

**Wired, Wireless or Removable Media Upload** ensures that recorded videos are transferred to the server in the manner appropriate to the size of the department and protocols for evidence transfer.

**40GB (standard) Internal Fail-Safe Drive** with a ruggedized, removable drive that is more durable and faster in most than standard CF, SDHC or P2 cards.
