

## Body-Worn Video Camera that Integrates with the COBAN DVMS

The latest generation, wearable police camera designed specifically for organizations or individuals that need to document their actions on video away from the vehicle.

**A Body Camera that Supplements COBAN Systems** videos taken by the COBAN VIEVU body-worn camera are automatically imported directly into the COBAN DVMS system and can be linked to the corresponding in-car video by case ID.

**Secured Device Management** ensures that videos taken with the COBAN VIEVU body-worn camera can only be imported into the COBAN DVMS.

**Videos are Processed and Managed** just like other COBAN in-car and interview room videos; including digital signature generation, view/export capabilities and lifecycle maintenance.

**Digital Signature Generation** ensures that both the COBAN VIEVU body-worn camera videos are marked with a unique digital signature to prove that the video has not been altered.

**Attaches Almost Anywhere**, the VIEVU body-worn camera can attach in multiple spots on the user's uniform or equipment.

**4 GB Internal Memory**, and a four hour recording time (standard) plus an increased low-light capability and enhanced image quality compared to other body-worn cameras.

**Hands-free, Pager Sized Design**, no cords, no cables, a single on/off switch, and a rugged, waterproof design.
